Notes:

1. Percentage change calculation uses the closing price on the day of the report divided into the closing price so many days out. The abridged report found on the website performs a different calculation. The website report uses the closing prices average within the projected period. This report uses the closing price for the projected day.
2. A Buy indicator has a value greater than 7.75.
3. Likewise, a Sell indicator has a value of less than 1.25.
4. The 2 "Calls - Average % Change" represent the change for all calls - correct and incorrect.
5. Category by ETFs Report -
 - 5.1 does not include ETFs labeled with "inverse" or "bear".
 - 5.2 does include leveraged ETFs (aka ETNs); since the report shows a "likeliness" of change and not a predicted percentage change.
6. The category "global" represents ETFs that is not US-related. This group includes foreign market indices, commodities, currencies, and more.
7. Limiting Performance Report to 45 days.
8. The 5 day period moving average function is based exponential weighted (based on day period).
9. Removed \$BZQ from Global sector group because it is an inverse ETF. Removed \$ULE because it is currency related. 2020-12-14
10. Split out of the Global sector list. 2020-12-14
 - Emerging sector ETFs moved from Global - \$DZK, \$EDC, \$EEM, \$EET, \$EMB, \$IEMG, \$INDA, \$INDL, \$VEA, and \$VWO
10. Split out of the Biotech sector list. 2020-12-17
 - Health Care sector ETFs moved from Biotech - \$CURE, \$XLV and \$RXL
 - Added %XHS and placed in Health Care sector.
11. Removed symbol \$YCS due to low volume requirement. 2020-12-14
12. Removed symbol \$SDD due to low volume requirement. 2021-01-27
13. A new section has been added to the report. The best and worst ETF picks for each of the next 30 days now appear before the 30 Day Estimates. 2021-03-12
