The above percentages are computed on per daily basis. Note that the ratios are more divergent than the "5 Days Performance Percentages" presented at the top main report. The daily inaccuracy is the main reason I prefer to use estimates based on averages over an extended period, such as 1-5 Days, 6 - 10 Days, etc.

Notes:

1. Percentage change calculation uses the closing price on the day of the report divided into the closing price so many days out. The abridged report found on the website performs a different calculation. The website report uses the closing prices average within the projected period. This report uses the closing price for the projected day.
2. A Buy indicator has a value greater than 7.75.
3. Likewise, a Sell indicator has a value of less than 1.25.
4. The 2 "Calls - Average % Change" represent the change for all calls - correct and incorrect.
5. Category by ETFs Report -
 - 5.1 does not include ETFs labeled with "inverse" or "bear".
 - 5.2 does include leveraged ETFs (aka ETNs); since the report shows a "likeliness" of change and not a predicted percentage change.
6. The category "global" represents ETFs that is not US-related. This group includes foreign market indices, commodities, currencies, and more.
7. Limiting Performance Report to 45 days.
8. The 5 day period moving average function is based exponential weighted (based on day period).
9. Removed \$BZQ from Global sector group because it is an inverse ETF. Removed \$ULE because it is currency related. 2020-12-14
10. Split out of the Global sector list. 2020-12-14
Emerging sector ETFs moved from Global - \$DZK, \$EDC, \$EEM, \$EET, \$EMB, \$IEMG, \$INDA, \$INDL, \$VEA, and \$VWO
10. Split out of the Biotech sector list. 2020-12-17
Health Care sector ETFs moved from Biotech - \$CURE, \$XLV and \$RXL
Added \$XHS and placed in Health Care sector.
11. Removed symbol \$YCS failed to meet minimum volume requirement. 2020-12-14
12. Removed symbol \$SDD failed to meet minimum volume requirement. 2021-01-27
13. A new section has been added to the report. The best and worst ETF picks for each of the next 30 days now appear before the 30 Day Estimates. 2021-03-12
14. Removed symbol \$SIJ failed to meet minimum volume requirement. 2021-04-18
15. Changed report name to ETF Expectations. 2021-04-22
